Product Description

The ASIT-31004PL switch provides power and data transmission from a network node through Cat.5e/6 cables. 5 ports could fast connect with 10/100Mbps, 4 ports among them could supply power at the standard of IEEE802.3af/at. With the auto-sensing function, it could supply power to PD device (IEEE802.3af/at standard). What's more, if the PoE device disconnected, it would stop supplying power. The switch features simple and reliable design, automatic identification of PoE supply voltage and power, speed, full duplex and AutoUplink cable type. With multi-function switch, it can be changed to long transmission distance mode, enable/disable VLAN

This cost-effective switch provides network layout which need to simplify wireless access point (AP) and IP-based surveillance network cameras to install in commercial network and home network. It is the ideal networking solution for work-groups and intelligent community fiber access. These devices away from electrical outlets are very suitable for hanging on the wall or ceiling. PoE eliminates the hassle for these devices, specially the electrical outlets. Connect the AC power connection to make those difficult device more flexible, and the installation cost minimization.
